

Problem 1:

- Create a reactjs simple app
- Create a dockerfile to containerize the reactapp
- Build the image and test it
- create a dockerfile for the same app in smaller size using multi staging

Problem 2:

- Create a dockerfile for ubuntu image which sleeps by default for 5 sec or sleeps according to the given number in the docker command

Problem 3:

- Push the images created in Problem 1&2 into your docker hub repo

Problem 4:

- Create 2 nginx containers with network type bridge, enter to one of them and use curl command to view the content of the other container.
